

Masters of Engineering

Masters without thesis option

The Master of Engineering (M.Eng.) degree is a course-based graduate program that does not include a thesis. Students in the M.Eng. program can complete graduate courses that align with their professional interests and career goals on a full-time or part-time basis. The curriculum (table below) is designed to give graduate students a strong foundation in advanced mathematics and mechanics, while also giving students the flexibility to explore topics of interest. More information on this program can be found in the [Student Handbook](#).

Master of Engineering in Mechanical Engineering

Course Number and Title	Credits
Mechanical Engineering and Mathematics Core	
Take the following:	
ME501 – Engineering Professional Development (1)	4
ME510 – Continuum Mechanics (3)	
Take at least ONE of the following:	3
MATH527 – Introduction to Applied Mathematics for Scientists and Engineers (3)	
MATH536 – Partial Differential Equations (3)	
MATH537 – Principles of Applied Mathematics (3)	
Take at least ONE of the following:	3

Course Number and Title	Credits
MATH565 – Introduction to Numerical Methods (3)	
MATH571 – Data Analysis (3)	
MATH572 Computational Statistics (3)	
ME536 – Computational Fluid Dynamics (3)	
ME570 – Finite Element Methods (3)	
ME571 – Parallel Scientific Computing (3)	
OR another course with a computational emphasis approved by the supervisory committee	
Mechanical Engineering Graduate Courses	11-20
Take between 11 and 20 credits from the following: – courses with ME prefix to be selected with student input and approved by supervisory committee	
Non-Mechanical Engineering Graduate Courses	0-9
Take between 0 and 9 credits from the following: Non-Mechanical Engineering graduate courses	
Culminating Activity	1
Take at least 1 credit from the following: ME690 – Master’s Comprehensive Examination (1-6)	
Grand Total Credits	31

The graduate committee has recently approved MATH 527 as the preferred class to meet the Mathematics core requirement.
